Age/Gender	: 73 Y/Male	Registration ON	: 15/Oct/2023 11:04AM	
LabNo	: 012310150005	Sample Collected ON	: 15/Oct/2023 11:06AM	
Referred By	: Self	Sample Received ON	: 15/Oct/2023 11:06AM	
Source Lab.	: SAI MANYA	Report Generated ON	: 15/Oct/2023 11:59AM	

## DEPARTMENT OF BIOCHEMISTRY

Test Name	Value	Unit	Bio Ref.Interval
-----------	-------	------	------------------

## Creatinine -Serum

Creatinine - Serum	2.0	mg/dL	0.80-1.30
Method: Picrate Method			

## Interpretation:

- This test is done to see how well your kidneys are working. Creatinine is a chemical waste product of creatine. Creatine is a chemical made by the body and is used to supply energy mainly to muscles.
- **A higher than normal level may be due to:**
- Renal diseases and insufficiency with decreased glomerular filtration, urinary tract obstruction, reduced renal blood flow including congestive heart failure, shock, and dehydration; rhabdomyolysis can cause elevated serum creatinine.
- 
- Small stature, debilitation, decreased muscle mass; some complex cases of severe hepatic disease can cause low serum creatinine levels. In advanced liver disease, low creatinine may result from decreased hepatic production of creatinine and inadequate dietary protein as well as reduced muscle mass.
